

ABSTRACT

A highly reliable plasma display panel which suppresses degradation of phosphor characteristic by removing impurity gases inside the plasma display panel.

- 5 Front board (2) including scanning electrodes (6) and maintenance electrodes (7) disposed parallel to each other and rear board (3) including data electrodes (12) and partitions disposed in parallel and exhaust hole (15) are disposed in a way such that scanning electrodes (6) and maintenance electrodes (7) of front board (2) and data electrode (12) of rear board (3) cross. Non-evaporating getter (19) such as zeolite is
- 10 disposed inside plasma display panel (1) near exhaust hole (15).
